

1. Deploy Your flask backend and express frontend in amazon single ec2 instance.

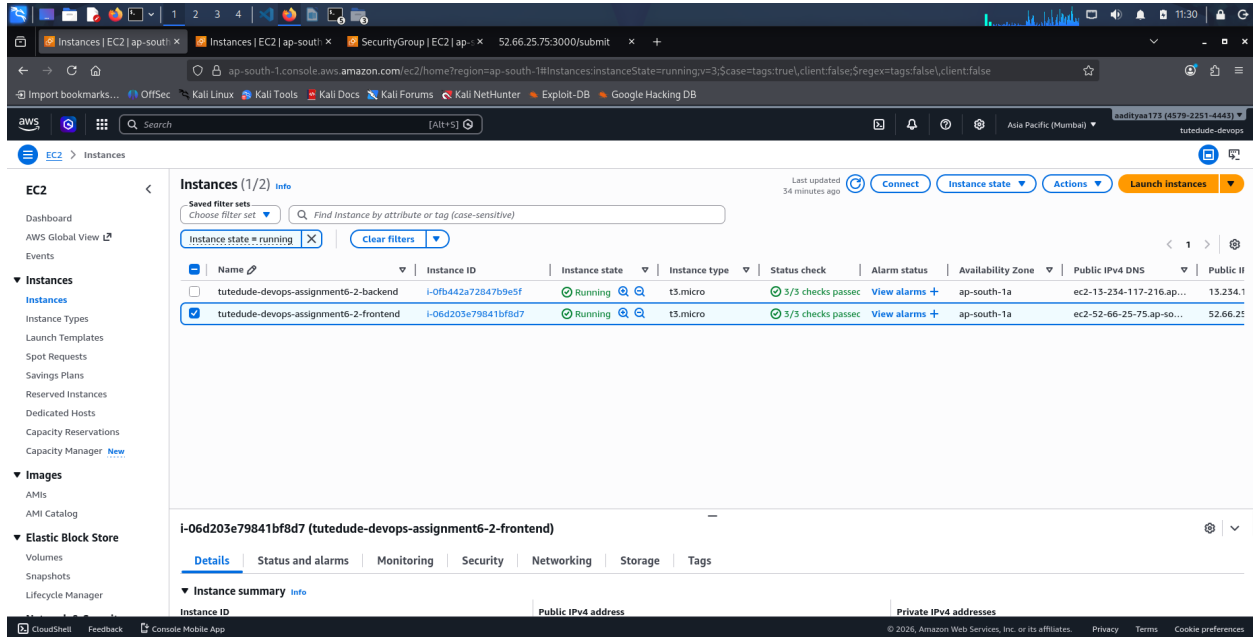

Data Received by Flask Backend

Name: Test User
Email: testuser@test.com

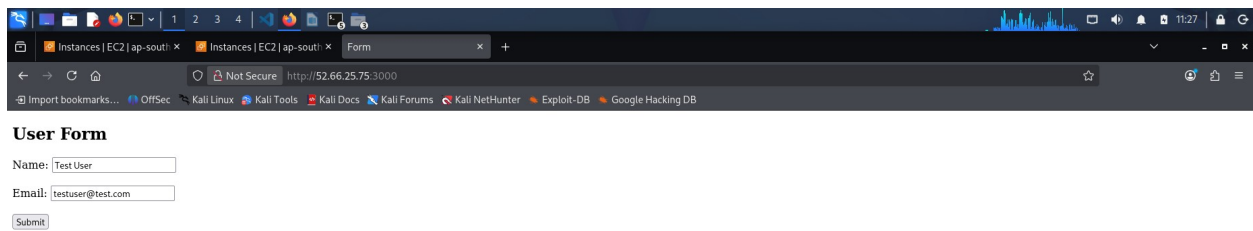

2. Deploy Your flask backend and express frontend in separate ec2 instances.

The screenshot displays the AWS Management Console's EC2 Instances page. The left sidebar shows the navigation menu with 'Instances' selected. The main content area shows a list of two EC2 instances. The first instance, 'tutedude-devops-assignment6-2-backend', is in a 'Running' state. The second instance, 'tutedude-devops-assignment6-2-frontend', is also in a 'Running' state and is selected. Below the list, the 'Instance summary' for the selected instance is visible, showing details like Instance ID, Public IPv4 address, and Private IPv4 addresses.

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS	Public IP
tutedude-devops-assignment6-2-backend	i-0fb442a72847b9e5f	Running	t3.micro	3/3 checks passed	View alarms +	ap-south-1a	ec2-13-234-117-216.ap...	13.234.1...
tutedude-devops-assignment6-2-frontend	i-06d203e79841bf8d7	Running	t3.micro	3/3 checks passed	View alarms +	ap-south-1a	ec2-52-66-25-75.ap-so...	52.66.25...

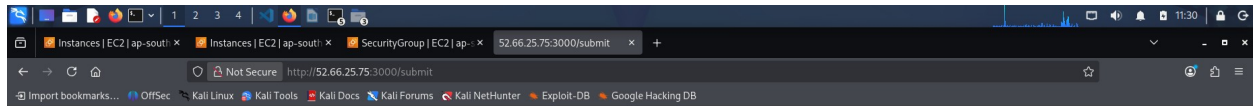

The screenshot shows a web browser displaying a 'User Form'. The form has two input fields: 'Name' and 'Email'. The 'Name' field contains the text 'Test User' and the 'Email' field contains 'testuser@test.com'. Below the input fields is a 'Submit' button.
